

FLUID-BAG

Winding Device Multi

Code No. 406561

Winding Device for Fluid-Bag Multi

The Winding Device Multi is used for easy and efficient discharge of liquids from Fluid-Bag Multi containers.

The device is mounted on top of the container poles and is very easy to use. The operator simply attaches the device to the top inlet of the Fluid-Bag inner container and winds the wheel to create tension. The tension stretches the inner container at the end of the discharge procedure, ensuring complete discharge with very low residue levels.

Winding Device Multi is a robust and cost-effective discharge solution made of electrogalvanized steel. The device does not require compressed air or electricity.
