

# What do you want to achieve?

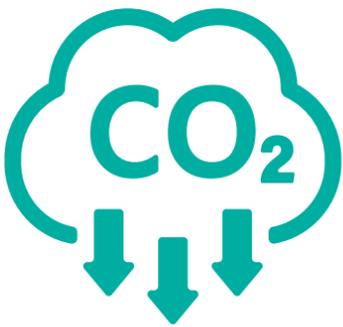

Reasons for Fluid-Bag as your new bulk packaging for viscous and semi-solid liquids.

1

## Lower residue

Residue in a flexible 1000-liter container from Fluid-Bag can be as low as 0.5 percent. Take care of your product and reduce the amount of waste.

2

## Reduced carbon footprint

Logistics is an important step in the value chain. Fluid-Bag's products have a low carbon footprint and can therefore help you reduce your overall climate impact.

3

## Eliminate contamination

The protective barriers in the Fluid-Bag inner container ensure the quality of your product. Plus, there is no need to open the container and let air in.

4

## No washing or re-cond

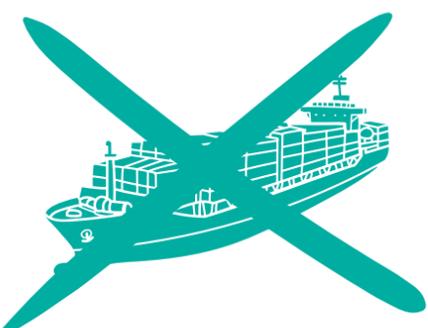

Costly, time-consuming cleaning, re-conditioning or maintenance of rigid steel or plastic containers can be a thing of the past. Fluid-Bag's disposable container makes handling easy.

5

## More free storage space

At Fluid-Bag we understand the value of saving space at your plant. In only 2.5 square meters, you can store 20 000 liters worth of Fluid-Bag containers.

6

## No return transportation

Don't spend your resources on expensive and inefficient return freights. Switch to Fluid-Bag and reduce both costs and pollution caused by return transport of empty containers.
